

## High Performance Time-of-Flight (ToF) Sensor

### Features

- Fast, accurate distance ranging
  - Measures absolute range up to 10m (white target) with accuracy indication
  - Adaptive output data rate up to 54Hz
  - Measuring result is not sensitive to the target color and reflectivity
  - Embedded electrical & optical cross-talk compensation
  - -10°C~+55°C temperature compensation
  - Ambient light compensation enables accurate measurement in high infrared ambient light levels
- Fully integrated miniature module
  - 850nm infrared LED emitter
  - Emitter driver
  - Integrated optimally-designed emitting & receiving optical lens
  - Ranging sensor with advanced embedded micro controller
  - Advanced embedded data processing & filtering algorithm
  - 115200bps 3.3V UART interface
  - 34(W) x 24(H) x 22(D) mm, 7g
- Eye safety
  - Compliant with latest Photobiological Safety of Lamps and Lamp Systems Standard IEC62471(Class 0), CE, FCC, RoHS

### Applications

- Drones (collision avoidance, soft-landing)
- Robotics & AGV (obstacle detection)
- Industrial location and proximity sensing
- Security and surveillance
- 1D gesture recognition

### Description

HPS-166 is a new generation Time-of-Flight (ToF) infrared ranging sensor with optimally-designed emitting & receiving optical lens, suitable for precise, long-distance measurements. It provides accurate distance measurement whatever the target color and reflectivity unlike conventional technologies. HPS-166 can measure absolute distances up to 10m on a white target, setting a new benchmark in ranging performance levels, opening the door to various new applications.

HPS-166 integrates a high-power 850nm infrared LED emitter and a high-sensitivity photodiode (PD) coupled with internal physical infrared filters, enables longer ranging distance and higher immunity to ambient light.

Advanced embedded data processing & filtering algorithm realizes extremely stable and real-time measurement outputs.

**CE FCC RoHS**

## Overview

### 1.1 Technical specification

Table 1. Technical specification

| Parameter                   | Values                                                             | Unit |
|-----------------------------|--------------------------------------------------------------------|------|
| Size                        | 34(L) x 24(W) x 22(H) *                                            | mm   |
| Weight                      | 6.8 * <sup>1</sup>                                                 | g    |
| Power supply                | 4 ~ 6                                                              | V    |
| Maximum power consumption   | 1.3                                                                | W    |
| Quiescent power consumption | 0.1                                                                | W    |
| Storage temperature         | -40 ~ 85                                                           | °C   |
| Operating temperature       | -10 ~ 55 * <sup>2</sup>                                            | °C   |
| Infrared LED emitter        | 850                                                                | nm   |
| Emitting angle              | ±1.8                                                               | °    |
| Maximum measuring distance  | 10 * <sup>3</sup>                                                  | m    |
| Minimum measuring distance  | 0.08                                                               | m    |
| Output data rate            | 6 ~ 54                                                             | Hz   |
| Output data                 | Distance, accuracy, signal strength, ambient IR level, temperature | -    |
| Connector                   | 0.5mm-pitch, 8-pin, FPC connector, top and bottom double contacts  | -    |
| Interface                   | TTL UART, 115200bps, 8 data bits, no parity, 1 stop bit            | -    |

Note: \*1 Without lens cover.

\*2 In continuous ranging mode, HPS-166 needs a few seconds warm-up time to stabilize the output. Attention needs to be payed to the heat dissipation of PCB board to avoid the increasing of thermal circuit noise.

\*3 Tested on 90% reflectance white target.

### 1.2 Mechanical drawing & device pinout

Figure 1. Front view of HPS-166

Figure 2. Top view of HPS-166

Figure 3. Bottom view of HPS-166

Figure 4. Front and bottom view of lens cover

Table 2. HPS-166 pin description

| Pin number | Signal name | Signal type    | Description                                          |
|------------|-------------|----------------|------------------------------------------------------|
| 1          | VDD         | Power          | Supply, to be connected to main supply (typical +5V) |
| 2          | VDD         | Power          | Supply, to be connected to main supply (typical +5V) |
| 3          | GND         | GND            | Ground                                               |
| 4          | GND         | GND            | Ground                                               |
| 5          | INT         | Digital output | Interrupt signal output (pulse width: 100us)         |
| 6          | RST         | Digital input  | Reset signal input, active low                       |
| 7          | RXD         | Digital input  | UART TTL input                                       |
| 8          | TXD         | Digital output | UART TTL output                                      |

All pins are compliant with IEC61000-4-2 ESD Immunity Test values presented in Table 3

Table 3. ESD performances

| Parameter            | Conditions |
|----------------------|------------|
| Air Discharge        | +/- 8kV    |
| Direct Contact       | +/- 4kV    |
| Indirect Contact HCP | +/- 4kV    |
| Indirect Contact VCP | +/- 4kV    |

Figure 5. Recommend FPC/FFC dimensions

### 1.3 Absolute maximum ratings

Table 4. HPS-166 pin absolute maximum ratings

| Parameter | Min. | Typ. | Max. | Unit |
|-----------|------|------|------|------|
| VDD       | -0.3 | -    | 6.5  | V    |
| RXD, RST  | -0.3 | -    | 5.6  | V    |

*Note: Stresses above those listed in Table 4. may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

## 1.4 Recommended operating conditions

Table 5. HPS-166 pin recommended operating conditions

| Parameter | Min. | Typ. | Max. | Unit |
|-----------|------|------|------|------|
| VDD       | 4    | 5    | 6    | V    |
| RXD, RST  | 2.8  | 3.3  | 3.6  | V    |

## 1.5 Application schematic

Figure. 6 Application schematic of the HPS-166

## Control interface

### 2.1 TTL UART serial interface

HPS-166 has a TTL UART interface and can communicate with any host that has a TTL UART interface. The logical level corresponds 3.3V powered logics.

Table 6. UART properties

|            |           |
|------------|-----------|
| Baud rate  | 115200bps |
| Start bit  | 1bit      |
| Data bit   | 8bits     |
| Parity bit | 0bit      |
| Stop bit   | 1bit      |

### 2.2 Communication protocols

After the sensor is powered up, system automatically performs the initialization procedures and the serial interface will output “Hypersen” if the initialization succeeded. A start byte “0x0A” is used to indicate the start of each command and returned data frame. Each HPS-166 has its universally unique identifier (UUID), which can be read out by sending a command from the host.

### Command #1: Acquire the sensor information

Table 7. Acquire the sensor information command

| Start byte | Command field | Data field |        |        |        |        |        | CRC MSB | CRC LSB |
|------------|---------------|------------|--------|--------|--------|--------|--------|---------|---------|
| Byte 0     | Byte 1        | Byte 2     | Byte 3 | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8  | Byte 9  |
| 0x0A       | 0x2E          | 0x00       | 0x00   | 0x00   | 0x00   | 0x00   | 0x00   | 0xFC    | 0x3C    |

### Returned data:

Table 8. Returned data of acquire the sensor information command

| Byte No. | Name          | Value | Description                                                           |
|----------|---------------|-------|-----------------------------------------------------------------------|
| 0        | Start byte    | 0x0A  | Start byte of the returned data frame                                 |
| 1        | Data length   | 0x18  | Length of the data field, it does not include byte No.0 and byte No.1 |
| 2        | ACK byte      | 0xB0  | Acknowledgment byte                                                   |
| 3~18     | UUID          | ..... | Universally unique identifier of device                               |
| 19       | Year          | ..... | Production date                                                       |

| Start byte | Command field | Data field |        |        |        |        |        | CRC MSB | CRC LSB |
|------------|---------------|------------|--------|--------|--------|--------|--------|---------|---------|
| Byte 0     | Byte 1        | Byte 2     | Byte 3 | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8  | Byte 9  |
| 0x0A       | 0x22          | 0x00       | 0x00   | 0x00   | 0x00   | 0x00   | 0x00   | 0xAE    | 0x57    |

**Returned data:**

Table 11. Returned data of ranging results

| Byte No. | Name           | Value | Description                                                               |
|----------|----------------|-------|---------------------------------------------------------------------------|
| 0        | Start byte     | 0x0A  | Start byte of the returned data frame                                     |
| 1        | Data length    | 0x0D  | Length of the data field, it does not include byte No.0 and byte No.1     |
| 2~4      | Reserved       | ..... | Reserved                                                                  |
| 5        | Distance MSB   | ..... | Measured distance, unit: mm                                               |
| 6        | Distance LSB   | ..... |                                                                           |
| 7        | Magnitude MSB  | ..... | Received signal magnitude                                                 |
| 8        | Magnitude LSB  | ..... |                                                                           |
| 9        | Magnitude Exp. | ..... |                                                                           |
| 10       | Ambient ADC    | ..... | Relative ambient IR intensity                                             |
| 11       | Precision MSB  | ..... | Precision indication, small values correspond to small measurement errors |
| 12       | Precision LSB  | ..... |                                                                           |
| 13       | CRC MSB        | ..... | CRC values of current data frame (Byte No.2 to No.12)                     |
| 14       | CRC LSB        | ..... |                                                                           |

**Note: Sensor will output a 65.53m over range indication if the measurement result is over ranged or receiving signal is too low.**

**The following is an example of the returned ranging data:**

0x0A 0x0D 0x01 0x01 0x01 0x06 0xD9 0xFC 0x8C 0x02 0x01 0x00 0x01 0x9B 0x94

**Decoding:**

0x0A: Start byte

0x0D: Data length (13 byte data)

Distance =  $(0x06 * 256 + 0xD9) / 1000.0f = 1.753$  (unit: m)

Magnitude =  $((0xFC * 256 + 0x8C) << 0x02) / 10000.0f = 25.8608$

Ambient ADC = 1

Precision =  $(0x00 * 256) + 0x01 = 1$

0x9B 0x94: CRC16-CCITT MSB and LSB byte

**Command #4: Stop ranging**

Table 12. Stop ranging command

| Start byte | Command field | Data field |        |        |        |        |        | CRC MSB | CRC LSB |
|------------|---------------|------------|--------|--------|--------|--------|--------|---------|---------|
| Byte 0     | Byte 1        | Byte 2     | Byte 3 | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8  | Byte 9  |
| 0x0A       | 0x30          | 0x01       | 0x00   | 0x00   | 0x00   | 0x00   | 0x00   | 0xBC    | 0x6F    |

**Returned data:**

Table 13. Returned data of stop ranging command

| Byte No. | Name        | Value | Description                                                           |
|----------|-------------|-------|-----------------------------------------------------------------------|
| 0        | Start byte  | 0x0A  | Start byte of the returned data frame                                 |
| 1        | Data length | 0x03  | Length of the data field, it does not include byte No.0 and byte No.1 |
| 2        | ACK         | ..... | 0x01: Succeed; 0x00: Fail                                             |
| 3        | CRC MSB     | ..... | CRC values of current data frame (Byte No.2)                          |
| 4        | CRC LSB     | ..... |                                                                       |

**Command #5: Set offset compensation value**

Due to the individual deviation of sensor performances, this command can be used to compensate the small offset deviation to achieve higher ranging precision. The offset values will be automatically saved to the internal non-volatile memory and reloaded with each power up.

Table 14. Set offset compensation value command

| Start byte | Command field | Data field |            |            |        |        |        | CRC MSB                           | CRC LSB |
|------------|---------------|------------|------------|------------|--------|--------|--------|-----------------------------------|---------|
| Byte 0     | Byte 1        | Byte 2     | Byte 3     | Byte 4     | Byte 5 | Byte 6 | Byte 7 | Byte 8                            | Byte 9  |
| 0x0A       | 0x38          | 0x1A       | Offset MSB | Offset LSB | 0x00   | 0x00   | 0x00   | Calculated CRC (Byte 0 to Byte 7) |         |

Offset = Actual distance – Sensor measured distance, unit: mm

Example:

Actual distance: 200mm, sensor measured distance: 215mm

Offset = 200 – 215 = -15 = 0xFFF1 (Offset MSB = 0xFF, Offset LSB = 0xF1)

**Returned data:**

Table 15. Returned data of set offset compensation value command

| Byte No. | Name        | Value | Description                                                           |
|----------|-------------|-------|-----------------------------------------------------------------------|
| 0        | Start byte  | 0x0A  | Start byte of the returned data frame                                 |
| 1        | Data length | 0x03  | Length of the data field, it does not include byte No.0 and byte No.1 |
| 2        | ACK         | ..... | 0x01: Succeed; 0x00: Fail                                             |
| 3        | CRC MSB     | ..... | CRC values of current data frame (Byte No.2)                          |
| 4        | CRC LSB     | ..... |                                                                       |

**Command #6: Load configuration profiles**

Table 16. Load configuration profiles command

| Start byte | Command field | Data field                                        |        |        |        |        |        | CRC MSB                           | CRC LSB |
|------------|---------------|---------------------------------------------------|--------|--------|--------|--------|--------|-----------------------------------|---------|
| Byte 0     | Byte 1        | Byte 2                                            | Byte 3 | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8                            | Byte 9  |
| 0x0A       | 0x3E          | 0x00:<br>User profile<br>0xFF:<br>Factory profile | 0x00   | 0x00   | 0x00   | 0x00   | 0x00   | Calculated CRC (Byte 0 to Byte 7) |         |

**Returned data:**

Table 17. Returned data of load configuration profiles command

| Byte No. | Name        | Value | Description                                                           |
|----------|-------------|-------|-----------------------------------------------------------------------|
| 0        | Start byte  | 0x0A  | Start byte of the returned data frame                                 |
| 1        | Data length | 0x03  | Length of the data field, it does not include byte No.0 and byte No.1 |
| 2        | ACK         | ..... | 0x01: Succeed; 0x00: Fail                                             |
| 3        | CRC MSB     | ..... | CRC values of current data frame (Byte No.2)                          |
| 4        | CRC LSB     | ..... |                                                                       |

**Command #7: Set output filter strength**

Increasing this value will improve the stability of output data but sacrifice some sensitivity. Decreasing this value makes the output data more sensitive to the distance change but sacrifice some stability. The default value is "0x000" and the setting values within  $\pm 100$  are recommended.

Table 18. Set output filter strength command

| Start byte | Command | Data field |            |            |        |        |        | CRC MSB                           | CRC LSB |
|------------|---------|------------|------------|------------|--------|--------|--------|-----------------------------------|---------|
| Byte 0     | Byte 1  | Byte 2     | Byte 3     | Byte 4     | Byte 5 | Byte 6 | Byte 7 | Byte 8                            | Byte 9  |
| 0x0A       | 0x3D    | 0xAA       | Filter MSB | Filter LSB | 0x00   | 0x00   | 0x00   | Calculated CRC (Byte 0 to Byte 7) |         |

Example:

Decrease the output stability by 50 units -> Filter value = -50 = 0xFFCE (Filter MSB = 0xFF, Filter LSB=0xCE)

Increase the output stability by 50 units -> Filter value = 50 = 0x0032 (Filter MSB = 0x00, Filter LSB=0x32)

**Returned data:**

Table 19. Returned data of set output filter strength command

| Byte No. | Name        | Value | Description                                                           |
|----------|-------------|-------|-----------------------------------------------------------------------|
| 0        | Start byte  | 0x0A  | Start byte of the returned data frame                                 |
| 1        | Data length | 0x03  | Length of the data field, it does not include byte No.0 and byte No.1 |
| 2        | ACK         | ..... | 0x01: Succeed; 0x00: Fail                                             |
| 3        | CRC MSB     | ..... | CRC values of current data frame (Byte No.2)                          |
| 4        | CRC LSB     | ..... |                                                                       |

**Command #8: Acquire the analog frontend (AFE) temperature**

Table 20. Acquire the analog frontend (AFE) temperature command

| Start byte | Command field | Data field |        |        |        |        |        | CRC MSB | CRC LSB |
|------------|---------------|------------|--------|--------|--------|--------|--------|---------|---------|
| Byte 0     | Byte 1        | Byte 2     | Byte 3 | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8  | Byte 9  |
| 0x0A       | 0x3F          | 0x01       | 0x00   | 0x00   | 0x00   | 0x00   | 0x00   | 0x36    | 0x86    |

**Returned data:**

Table 21. Returned data of acquire the analog frontend (AFE) temperature command

| Byte No. | Name                | Value | Description                                                           |

## Revision history

Table 23. Document revision history

| Date               | Revision | Description                                                          |
|--------------------|----------|----------------------------------------------------------------------|
| 23-December-2016   | 1.0      | Initial release.                                                     |
| 01-January-2017    | 1.1      | Added description of recommend FPC/FFC dimensions.                   |
| 10-January-2017    | 1.2      | Modified the Output data rate: 6-54 Hz.                              |
| 05-February-2017   | 1.3      | Modified the device pinout of V1.91 hardware. Add command #5 ~ #7.   |
| 20-February-2017   | 1.4      | Replaced the picture with V1.93 hardware. Modify the device pinout.  |
| 24-February-2017   | 1.5      | Added command #8. Correct the device pinout.                         |
| 07-March-2017      | 1.6      | Added CRC calculation description to command & returned data.        |
| 31-March-2017      | 1.7      | Modified command #8 and returned data format.                        |
| 11- February -2018 | 1.8      | Added description of over range indication and ordering information. |
| 03-August-2022     | 1.9      | Modified the maximum range value.                                    |
| 19-August-2022     | 2.0      | Update the sensor picture with V1.95 hardware version.               |

## Appendix

### CRC16-CCITT C-language Implementations

#### Implementation 1:

```
#####  
#include<stdio.h>  
/**  
Flash Space: Small  
Calculation Speed: Slow  
*/  
/*Function Name:      crc_cal_by_bit      //Calculate CRC by bit  
  Function Parameters: unsigned char* ptr  //Pointer of data buffer  
                     unsigned char len    //Length of data  
  
  Return Value:      unsigned int  
  Polynomial:        CRC-CCITT 0x1021  
*/  
unsigned int crc_cal_by_bit(unsigned char* ptr, unsigned char len)  
{  
    #define CRC_CCITT  0x1021  
    unsigned int crc = 0xffff;  
  
    while(len-- != 0)  
    {  
        for(unsigned char i = 0x80; i != 0; i /= 2)  
        {  
            crc *= 2;  
            if((crc&0x10000) !=0)  
                crc ^= 0x11021;  
            if((*ptr&i) != 0)  
                crc ^= CRC_CCITT;  
        }  
        ptr++;  
    }  
    return crc;  
}  
#####
```

**Implementation 2:**

```
#####
#include<stdio.h>
/**
Flash Space: Medium
Calculation Speed: Medium
*/
/* Function Name:      crc_cal_by_halfbyte    //Calculate CRC by half byte
   Function Parameters: unsigned char* ptr    //Pointer of data buffer
                        unsigned char len     //Length of data

   Return Value:      unsigned int

   Polynomial:        CRC-CCITT 0x1021
*/
unsigned int crc_cal_by_halfbyte(unsigned char* ptr, unsigned char len)
{
    unsigned short crc = 0xffff;

    while(len-- != 0)
    {
        unsigned char high = (unsigned char) (crc/4096);
        crc <<= 4;
        crc ^= crc_ta_4[high^(*ptr/16)];
        high = (unsigned char) (crc/4096);
        crc <<= 4;
        crc ^= crc_ta_4[high^(*ptr&0x0f)];
        ptr++;
    }
    return crc;
}
